

Document Information

Field	Details
Document Title	Test Plan
Project Name	Tripva
Application Type	Travel Booking Web Application
Document Version	1.0
Prepared By	Shyamalan M
Testing Type	Manual Testing

Introduction

Purpose

The purpose of this Test Plan is to define the testing approach, scope, resources, and activities required to perform manual testing of the Tripva web application.

Testing Objective

The objective of testing is to verify that the available Tripva functionalities work according to the documented requirements and to identify, document, and track defects found during testing.

Testing Approach

The application will be tested manually by preparing and executing test scenarios and detailed test cases based on the requirements documented in the SRS.

The testing will include:

- Functional Testing
- UI Testing
- Integration Testing
- Smoke Testing
- Sanity Testing

- Regression Testing
- Positive Testing
- Negative Testing

Test Deliverables

The following deliverables will be prepared:

- Test Scenarios
- Test Cases
- Test Execution Report
- Defect Reports
- Requirement Traceability Matrix (RTM)
- Test Summary Report

Scope of Testing

In Scope

Testing will cover the currently available functionality of the Tripva website, including:

- Home page
- Navigation
- Bus search interface
- From and To location fields
- Journey date
- Search Buses option
- Popular routes
- Notification / early-access functionality
- Email validation
- Informational sections
- Footer links
- Privacy Policy
- Terms and Conditions
- Contact information
- UI and usability

Out of Scope

The following are outside the scope of current test execution:

- Features that are locked
- Features marked as Preview Only

- Features marked as Coming Soon
- Backend/API testing
- Database testing
- Performance/load testing
- Security penetration testing
- Source code testing
- Mobile application testing

Testing Types

Functional Testing

Verify that the available functionalities of Tripva work according to the documented requirements.

UI Testing

Verify the user interface, including:

- Text and labels
- Buttons
- Input fields
- Images
- Links
- Navigation
- Page layout

Integration Testing

Verify the interaction between related features.

Examples:

- Home Page → Bus Search
- Bus Search → Search action
- Popular Routes → Related navigation
- Email field → Notify Me

Smoke Testing

Verify the major available functionalities to determine whether the application is stable enough for detailed testing.

Sanity Testing

Verify specific functionality after changes or fixes to ensure the affected functionality is working as expected.

Regression Testing

Re-execute previously passed test cases after changes or fixes to ensure existing functionality has not been affected.

Positive Testing

Verify the application using valid inputs and expected user actions.

Negative Testing

Verify that the application handles invalid, incomplete, or unexpected inputs appropriately.

Test Environment

Item	Details
Application	Tripva
Application URL	https://tripva.in/
Testing Type	Manual Testing
Operating System	Windows
Browser	Google Chrome
Test Environment	Web Application
Internet	Required

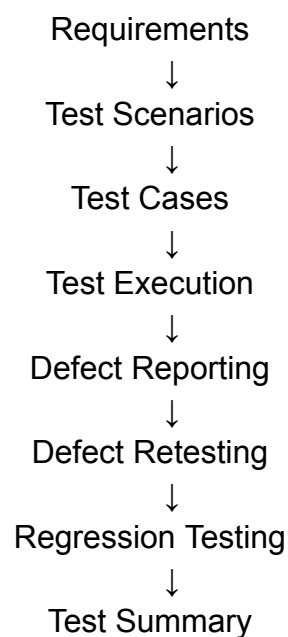

Test Strategy

Test Execution Strategy

Testing will be performed manually based on the requirements documented in the SRS.

Test scenarios will be identified from the requirements, followed by detailed test case preparation and execution.

The testing process will follow:

Defect Management

Defects identified during test execution will be documented with:

- Defect ID
- Defect Title
- Description
- Steps to Reproduce
- Expected Result
- Actual Result
- Severity
- Priority
- Environment
- Status
- Screenshot/Evidence

Entry Criteria

Testing can begin when:

- The Tripva website is accessible.
- Requirements are documented and understood.
- The test environment is available.
- Test scenarios and test cases are prepared.
- Required test data is available.

Exit Criteria

Testing can be completed when:

- All planned test cases have been executed.
- All identified defects have been documented.
- Critical defects are resolved or accepted.
- Failed test cases have been re-tested after fixes.
- Regression testing has been completed where required.
- Test results have been documented.

Risks

Risk	Mitigation
Website may be unavailable	Resume testing when the website becomes available.
Some features are Preview Only or Locked	Test only the functionality currently available.
Website functionality may change during testing	Re-verify affected test cases after changes.
Browser-related issues may occur	Use the defined test environment consistently.

Test Deliverables

The following documents will be prepared:

- Test Scenarios
- Test Cases

- Test Execution Report
- Defect Reports
- Requirement Traceability Matrix (RTM)
- Test Summary Report
