Application Name	Tripva
Application URL	https://tripva.in/
Application Type	Travel Web Application
Testing Type	Manual Testing
Testing Approach	Requirement-based Manual Testing
Tester	Shyamalan M
Project Status	In Progress
Document Version	1.0

Project Description

Tripva is a web-based travel platform that provides users with travel-related services and information. The application includes features such as bus search, popular routes, notification/early-access functionality, and information about upcoming travel services.

The purpose of this project is to perform manual testing of the available Tripva web application functionality, identify defects, and document the testing activities and results.

Testing Objective

The objective of this project is to:

- Verify that the available application functionalities work as expected.
- Identify functional and UI defects.
- Validate positive and negative scenarios.
- Verify navigation and interactions between related features.
- Document test execution results.
- Report and track identified defects.

Tools Used

Tool	Purpose
Google Chrome	Application testing
MS Excel / Google Sheets	Test scenarios, test cases, execution
MS Word / Google Docs	SRS, Test Plan and reports
GitHub	Project documentation and version control
